

# Aconselhamento Genético para Criadores de Pequenos Animais

Laudo sobre composição genética da ninhada dos cães

## FEITIZO DE FEITIZOS DAS MEIGAS X AGATHA DA COLINA DOS BUGRES

Os dados listados abaixo demonstram a importância de cada ancestral na composição genética da ninhada atual.

**Significado das colunas da esquerda para a direita:**

- Coluna 1: qual é a similaridade genética entre a ninhada e este animal, ou seja, o grau de parentesco. Para pai e mãe sempre será de 50%, e diminui quanto mais distante o parentesco
- Coluna 2: nomes de cada animal deste pedigree de 5 gerações cadastrado
- Coluna 3: sexos dos animais
- Coluna 4: quantas vezes este animal aparece no pedigree
- Coluna 5 (Hom%): probabilidade que ambos genes de uma determinada característica tenham sido herdados deste ancestral
- Coluna 6: coeficiente de consanguinidade deste animal. Quanto maior, maior a chance do mesmo ter doenças recessivas (acima de 11% é considerado risco aumentado)
- Coluna 7: qual geração o animal aparece (geração 1, são pais; 2 são avós, etc)
- Coluna 8: posição no pedigree
